

Offline MIT AppInventor used to repair my APP_nc183c, composed with Version nc183c and made dysfunctional when opening with nc184.

<http://pr2268.ai2-ewpatton-temp.appspot.com/#5699303985119232>

The repair/recovery of the APP_nc184 with the ewpatton MIT AppInventor was successful despite the complain that APP_nc184 was created with a newer version (sic) and works again flawlessly with the Samsung TABA, Android 10 Tablet. However for ultimate comfort a version of the Companion is needed, as the as of July 9th available MIT AI2 in Googleplay does not work with ewpatton offline and the ewpatton link for a supposedly compatible AI2 companion leads into nirvana.

My nc184 bug problem is the retrieve/load/store and delete file in the tablet.

From the instructions for file management, namely /file.ext (.csv and txt) never resulted in a SD Card storage but instead all files are fetched or stored in the root directory of the tablet, as shown below.

Upon opening opening the APP:
 The .csv files are read into the APP if KW(=week of the Year) if KW>= current week and deleted if KW<current week of the Year.
 The .txt files are the result of the APP and are deleted if KW<current week of the Year
